**We don't make FIX engines.
We make them better.**

ABOUT THE LASALLE TECHNOLOGY GROUP, LLC

The LaSalle Technology Group, LLC was founded in 2006 by father and son team of Jim and Jacob Northey. Lasalletech is focused on delivering expertise in the high tech finance industry while developing products that make deploying large financial applications easier. Lasalletech provides a suite of tools designed to lower the cost of FIX adoption and usage. Having worked closely with the FIX Protocol Ltd. in developing the FIX and FAST specifications, both Jim and Jacob have great insight into the current implementations as well as where the two standards are heading. The Lasalletech FIX Workbench suite follows their successful introduction of their commercially available DataSheet development framework and their open source OpenFAST library.

Lasalletech Announces FIX Explorer™ Mobile, a New Free Mobile Dictionary for the FIX Community

Lasalletech is committed to bringing the FIX community resources that make trading faster, easier, and less expensive. This week they announce the availability of FIX Explorer Mobile for Apple iPhone users.

FIX Explorer Mobile is a dictionary that supports all versions of FIX and includes a glossary, message definitions, and enumerations of those fields.

FIX Explorer Mobile allows users to quickly search through all versions of FIX from 4.0 through 5.0SP2 for any field, component, or message using a variety of search parameters including tag, field name, or message type.

Since its release in mid-March, the app has been downloaded by 210 users across the globe. Mr. Clive Browning, from Rapid Addition Ltd., has been using this app now for 2 months. "It is a nifty little app that allows me to do quick look-ups by FIX version tag, component and message type. Very useful for when on the road and I don't have direct access to FIXimate."

The creator of FIX Explorer Mobile, Craig Otis designed this app as a tool to allow users the mobility of a FIX dictionary. "In an increasingly fast-paced industry, having immediate and portable access to specification Messages and Fields is an extremely valuable tool. FIX Explorer Mobile is the perfect tool for anyone who needs access to the FIX Specification messages while on-the-go."

iPhone users can download the app for free from the Apple App Store or directly from the Lasalletech website (<http://www.lasalletech.com/products/>).

Lasalletech will continue creating products and tools for the industry. Later this year, they will announce plans for new products and partnerships, including support for extension packs, which are planned in a future version of FIX Explorer Mobile.
